An appendix can shatter or develop holes or tears in its walls, letting stool, mucus, and infection leak through and enter the belly. As a result, peritonitis can develop.

Appendicitis is a medical emergency. The infection could result in a deadly position if the appendix ruptures. Due to this, your healthcare provider will nearly always recommend that you have your appendix removed.

A launch arrangement or a laparoscopic arrangement can be used to remove the appendix.

2 Methods

Anesthesia must be given to you. The lower right-hand side of your stomach is cut (incision). The healer removes the appendix. Your doctor will remove the shunt in a few days after the infection has subsided.

2. The laparoscopic technique

Anesthesia is required to care for you. A laparoscope (camera) glances inside your stomach through various cuts (incisions). A few microscopic incisions are made to insert the surgical tools. Whichever incision is to the area of the laparoscope. Often, even though the appendix bursts, a laparoscopy can be performed.

Laparoscopic surgery will remove the appendix. The slim instrument (laparoscope) will be inserted through small incisions (cuts) in the abdomen by the surgeon. In this way, there is no requirement for an abdominal incision.

If this is not possible, a limited incision is made in the lower abdomen. There are a lot of cuts in the intestine and stitches in the injured along with the appendix. The healer will insert a tube and drain pus from the abdominal cavity if the appendix bursts. The patient is delivered antibiotics intravenously to reduce the risk of peritonitis.

An appendectomy typically needs a hospital stay of between three and five days. Short-term or long-term, removing the appendix seems to have no set aside for the digestive system.

After an appendectomy, if your appendix has not burst, you'll only require a few days to recover. If your appendix bursts, your recovery time will be longer, and you'll require antibiotics.

- CT of the abdomen if necessary
- Ultrasonography is a choice to CT
